

AntiBug® ColourCoat Evo-Therm Bottle

Your very own choice of Pantone colour applied in a gloss or satin finish to the outer body of our popular Thermal Bottles. Our high quality thermal drinks bottle is made from 304 grade stainless steel. Available on standard service from as little as 90 pieces in 10 days or economy from 510 pieces in 3-4 weeks. Keeps liquids hot for up to 12 hours and cold for up to 24 hours.

This product is treated with our patent protected, fully certified AntiBug® treatment to keep germs at bay.

Key Product Information

Product Code:	12155THR
Commodity Code:	9617000000
MOQ:	90 on Standard, 510 on Economy
Size:	See Artwork Requirements
Branding Area:	170 x 110mm
Branding Method:	Screen Print
Material:	Stainless Steel
Made In:	UK or custom order from China
PDF Proof:	24-48 Hours
Express Service Available:	Not Available
Printed Proof Leadtime:	10 Working days (Standard), N/A (Economy)
Leadtime:	10 (Standard) or 21-28 (Economy) Working days from proof approval
Colour:	Gloss and satin finishes available in any standard pantone colour. The lid remains silver.
Weight:	299g
Capacity:	500ml

Packaging and Other Information

No Per Carton:	50
Packaging Details:	400 x 780 x 300mm
Carton Weight:	20Kg
Standard Packaging:	White box
Alternative Packaging:	Printed Sleeve, Presentation Tube

Recommendations and Limitations

Neon and metallic finishes are not available on this bottle. Hand wash only. Do not use in a microwave oven. Please wash mug before use.

QR Codes - Please note that the print process and substrates used in the production of this item may not always allow QR codes, if present on your artwork, to function correctly. When approving your proof, you are accepting that this may be the case and as such accept full liability for any malfunction of the QR code.

Ideal For: Tourist Attractions, Builders Merchants, Councils, The Office and Home, Educational Organisations

ColourCoat Eevo-Therm Bottle

Sizes available: 250 x 67mm diameter

We can accept artwork by disk, email or you can upload onto our FTP site. Please contact us for details.

Programs:

Mac: QuarkXpress 7, Illustrator, PhotoShop, and Adobe In Design.

PC: PhotoShop and Adobe InDesign

Please supply us with:

- Finished version of the artwork.
 - All of the source files used to create the finished version, including all high resolution scans, all screen and printer fonts
- Label the disk with job title and return address.

All artwork supplied must be fully editable. The finished version should be supplied as a CYMK file (plus spot colour separations.)

Please note text must be no smaller than 8pt (15pt for etched mugs) and reversed out text should be larger and in bold.

Emailed artwork must be clearly labelled with your order number and company name in the reference line, or supplied on CD with the same information clearly marked. 4 colour process artwork needs to be 300dpi or higher.

Supply a print out:

Black and white or from a low-cost colour printer using the right file, not an earlier version. Label with PMS references for all corporate colours or other critical colour matches. Supply colour samples or swatches at the outset. Customer supplied printouts cannot be matched because there is no consistency of calibration between their machine and our press.

For Screen Printed designs please supply the following:

- Editable EPS file
- Image saved at 100% size or larger
- Pantone® references supplied for colours
- Fonts supplied or text saved as curves

Due to nature of this product tight registration may be difficult - registration may move by up to 3mm on screen print.

If you would like further information regarding a specific design, please feel free to contact us

See the following page(s) for the artwork templates for this product.

Protection and promotion with our new range of AntiBug® products

Consider how quickly germs spread in a busy workplace; our new, patent protected, fully certified AntiBug® products keep germs at bay. The unique treatment is available on a variety of popular and effective promotional items enabling key messages to be promoted whilst providing protection against germs.

The specialist surface starts to fight germs as soon as they come into contact with the product and have been clinically proven to kill 99.99% of harmful bacteria within a 24 hour period. What's more, AntiBug® products can withstand repeated cleaning cycles whilst maintaining antibacterial effectiveness. The controlled release of the active ingredient provides maximum long term activity.

The AntiBug® protection is available on a range of our bestselling promotional products, these include a selection of mouse mats, pantone matched ColourCoat mugs and our entire range of screen printed ceramic mugs, coasters and counter mats.

Look out for the AntiBug® symbol in the 2011 brochure and on www.businessgiftlist.com.

AntiBug® products are ideal for;

- Infection control initiatives
- Domestic Cleaning Brands
- Clean rooms / manufacturing facilities
- Doctors surgeries
- Hospitals
- Food preparation, catering and kitchen environments
- Nursing homes, prisons and residential centres
- Hotels & holiday villages
- Call centres and busy office environments

AntiBug® products have been successfully tested against over 50 common organisms such as;

- MRSA
- E.coli
- Salmonella
- Listeria
- Pseudomonas
- Aspergillus Niger

Keep your brand alive whilst protecting your target audience by choosing an AntiBug® product. For more information, visit www.businessgiftlist.com or call your usual sales contact.

AntiBug®

Silver Antimicrobial Clinical Study

A pilot study, undertaken at a large NHS Trust examined the bacterial contamination found upon products in a clinical setting containing silver additives.

The study compared two clinical settings one with no antimicrobial in place and the other using silver additives treated products. Products exhibited a 95.8% reduction in bacterial contamination. The outcome is a reduction in the risk of bacterial load, therefore reducing the risk of contamination.

Compared to a ward with no antimicrobial products in place, the ward containing silver treated products exhibited an overall effect of reducing bacteria levels by 95.8% in the environment, thus greatly reducing the risk of cross contamination.

The untreated ward contained all standard items normally seen in a ward; the silver protected ward contained the same items but with the silver technology applied either to the coating on the surfaces or directly into the substrate itself.

The additives can be found in a wide range of hospital and care home products including bed frames, curtains, hand soap dispensers, hand sanitizer dispensers, sinks, taps and medical case note holders.

These products incorporate silver-based technologies which, when challenged by the presence of bacteria on a surface, release silver ions which inhibit the cell's ability to reproduce.

The silver ions enter the cell through its outer layer, block the enzymes thus preventing cell from generating energy, and disrupt its DNA thereby removing the cell's ability to split and create a duplicate of itself.

A clinical swab of surfaces within the silver treated clinical area revealed a reduction of 92.6% in bacterial load. The evidence demonstrates the effect of silver ions in the reduction of bacterial load in clinical settings. A clean environment benefits both patients and staff in areas where good hygiene levels are crucial for Clean Safe Care.

Frequently Asked Questions

Why Silver?

Silver is a metallic element, atomic number 47 and chemical symbol Ag. Silver ion technology is a proven antimicrobial against a wide range of organisms.

How does it work?

Antimicrobials are added to a product at the time of manufacture. These silver ions then concentrate on the surface of the product and are available to act against any contaminating bacteria. The silver ions bind with the bacteria and damage their cells in a number of ways, disrupting their normal function, stopping them from reproducing and causing them to die.

Is it safe?

Yes - silver technology has a low toxicity and is used in a wide range of applications such as implantable devices and skin creams. The antimicrobials are also microns in size, many thousands of times bigger than nano particles.

How long does it last?

The AntiBug® Coating will last for the normal life of the product under correct use.

Does it replace cleaning?

The additive is complementary to cleaning practices. The technology continues to work 24 hours a day in between the normal cleaning schedules thus reducing growth of the microbes preventing them from reaching potential dangerous levels.

Is the look and feel of the product affected by the AntiBug® Coating?

There will be no change to the characteristics of the product other than achieving antimicrobial efficacy.

Can bacteria become resistant to silver ion technology?

Due to the several modes of action silver utilizes, it is highly unlikely bacteria will become resistant to the AntiBug® coating.

Does it leach?

No, silver ions do not leach but remain active on the surface of the product.

Is it regulated?

Yes - in the UK and EU by the Biocidal Products Directive (BPD) and in the US by the EPA.

Health & Environmental Considerations

Toxicology

Acute oral LD50 Rat	5000mg/kg
Irritancy	Skin Irritation: Negative
	Eye Irritant: Mild/moderate as a powder
Sensitisation	Non-sensitising to healthy human skin
Mutagenicity	Non mutagenic
Carcinogenicity	No evidence
Teratogenicity	No evidence
Phototoxicity	No evidence

Regulatory Information

Animal Testing

The AntiBug® Coating has not been tested on animals. The novel active component has had toxicological testing carried out but only in connection with its use as a pharmaceutical active agent.
